REALIZACIÓN DE LA ACTIVIDAD

WRITE A DESCRIPTION OF THE NETWORK SOLUTION YOU USE AT WORK OR AT HOME. WHICH OF THE THREE SOLUTIONS IN 4 IS IT MOST LIKE? WHY?

Computer 

Speakers 

Router 

Repeater 

Printer 

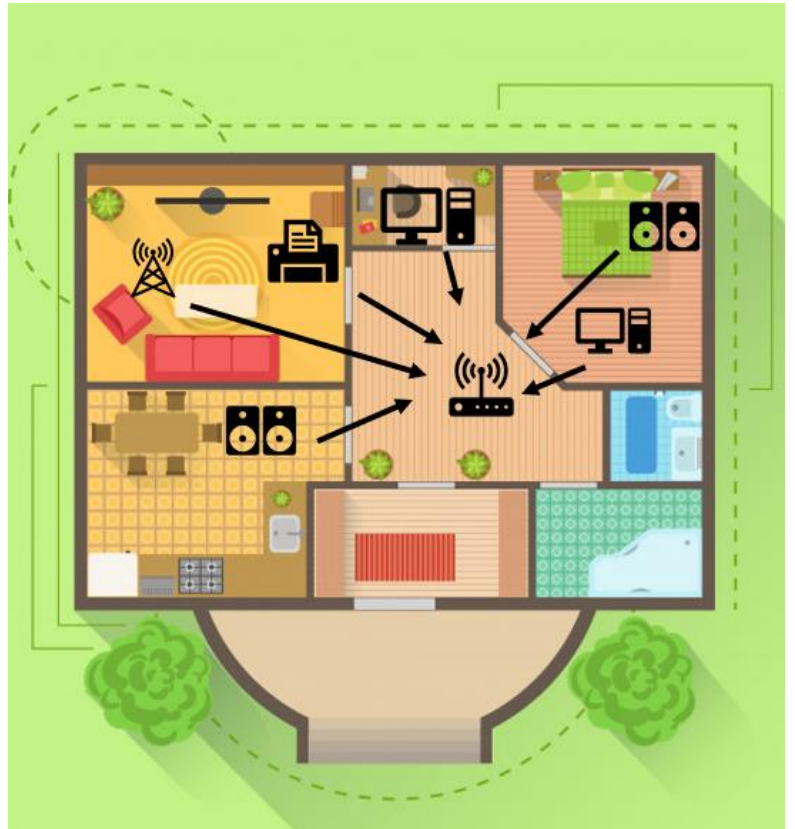

Ilustración 1-My house

In my house, my router is in the hall where it distributes a better signal and shares Wi-Fi throughout the house.

In the kitchen are the speakers where they connect to the Wifi to play music.

In the main room there is a repeater where it helps to spread more connection throughout the house and outside the house and to finish the printer where it also connects to all computers.

In the study room there is only a single computer where it connects with LAN.

And finally I have my computer connected LAN to the router and the speakers also to play music.

I have created the image shown, I have not copied the design or taken a screenshot.

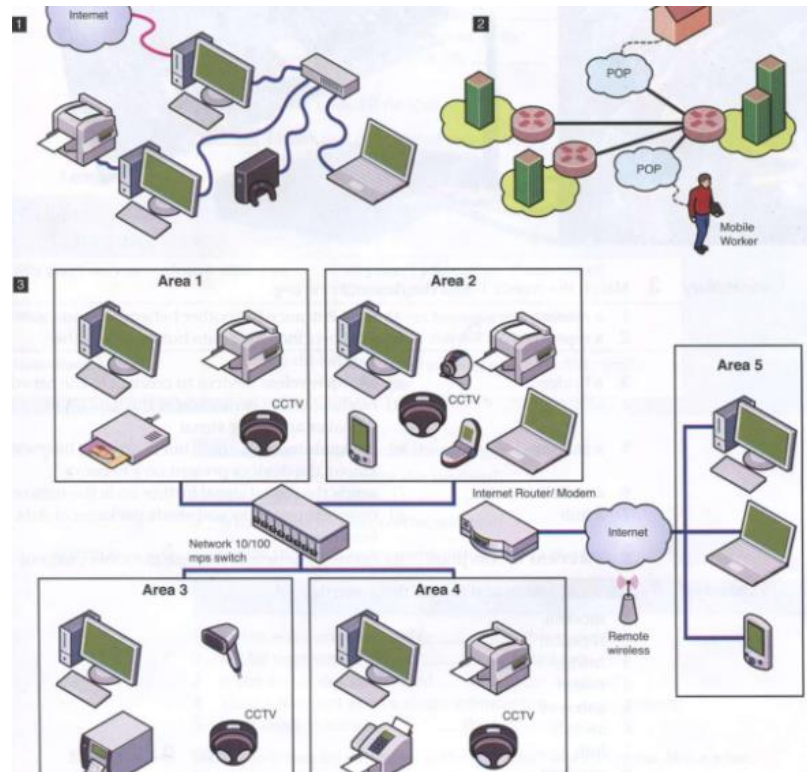

Ilustración 2-Exercise

In my case, image 1 is similar, because it has a house model, that is, I have 2 computers, a printer and speakers.

I also have two computers where they are connected by cable or by LAN, but most are connected by waves.

Because I use only router and repeater to make it fluid enough.

Because of the structure of my house, I can't have the house connected by cable everywhere.
